SUMMARY

Passionate and self-driven Front-End Developer with experience in creating responsive web applications. Self-taught with a strong foundation in HTML, CSS, JavaScript, and React.js, and a commitment to staying up to date with the latest web technologies and features. Proven ability to collaborate effectively and deliver high-quality, promising code.

SKILLS

JavaScript

I have experience building interactive websites with JS, as well as making calls to APIs and using external libraries and frameworks to enhance my code.

HTML

Proficient in writing clean and easy to read code with HTML that produces real world websites and ideas.

CSS

Proficient in styling and designing visually appealing websites, as well as animations and incorporating it into my JavaScript projects.

React

Experience creating real-world interactive web applications with the JavaScript framework. Good understanding of classes and components, and rendering and modifying DOM elements.

PROJECTS

Mapty

GeoLocation and External Libraries

I created a web application that rendered a map using the leaflet library and the geolocation API to get your location in the world. This application allows users to add a workout on the map at the specific location where that workout was completed, allowing you to look back and track past workouts.

TimeTable

React framework

I used the React framework and JavaScript to create an application that allows you to set tasks on a to-do list, and then track how long it takes you to complete each task with their own timer, allowing the timer to keep running even if the application isn't open.

Dog Tracker

Contributed to the user-interface design of a dog-tracking application using the OpenCV API and camera detection.

OBJECTIVE

My objective for my career is to leverage my creative and technical skills as a developer, contributing to the production of user-friendly web applications. I aim to continuously enhance my proficiency in modern web technologies while delivering high-performance technical solutions that'll lead to me growing as a developer.
